

## Supply - Milling

MTSA Technopower is a renowned supplier of high-quality mechanical parts and modules as one-off pieces or small series for OEM, research centres and service companies. These products are made according to customer specification, which can be realised in collaboration with the MTSA Technopower engineering departments.

MTSA Technopower has an advanced machine park and assembly halls with CNC lathes, milling machines, horizontal and vertical machining centres, spark machining and sheet-metal working machines, amongst others. Our professionals have a lot of expert and material knowledge and specialise in machining difficult materials such as stainless steel, Hastelloy and copper.

MTSA Technopower has a complete CAM package. 3D milling is one of the many facilities it provides.

Thanks to a combination of various machining disciplines, joining techniques such as welding, and engineering, MTSA Technopower can offer you a high degree of flexibility. We work with short turn-around times. We usually deliver within a few weeks, but we can often deliver as quickly as within a few days, in consultation.
