

MTSA Technopower reference High grade material processing plant

A producer of high grade material could possess of significant amounts of recycled parts made of this material and intended to turn it into a useful product. In cooperation with MTSA Technopower a processing plant was designed and built for the recycling of this material to a useful end product.

The MTSA Technopower activities included the following:

- Concept study
- Conducting tests to select and design equipment
- Carrying out the basic engineering
- Turn-key execution of the project
- Assistance with the start-up and implementation
