

EM-TECHNIK GMBH is a supplier of small highquality fittings and connectors made from special plastics and provides, from a single source, solutions for many applications – an invaluable advantage for the user. The products form a modular system in which every part is compatible and of variable application. Today, with its high-tech products, the company is a leading international supplier in the plastics sector.

The company was founded in 1965 by Norbert Meier and has been managed by the 2nd generation of the family since 1995. In order to meet international requirements and market needs, investment in the market abroad has increased. Numerous foreign representatives and subsidiaries worldwide provide local support and advice to customers and potential customers.

You will find EM-TECHNIK products in technically complex and advanced sectors such as analysis technology, measurement and control technology, the chemical industry, plant construction, machine tool and appliance manufacture, biotechnology, high purity water technology and semiconductor technology. Here the progress in science and technology continually places new requirements on product development and on careful implementation during production.

Production essentially encompasses two manufacturing methods; here the latest machines and in-house mould manufacture are employed. Along with mechanical manufacturing, i.e. turning, drilling, milling etc., products are also manufactured using injection moulding and then – depending on requirements – further processed. Detailed final inspection ensures constant product quality. Cleaning, assembly and packaging of the products in clean-room quality (ISO class 5) is possible on request.

For a range of application areas, the following plastics are currently in use: PA, PP, natural PP, PVDF, PVDF-HP, PTFE, PFA und PFA-HP.

Notes on the catalogue:

In our complete catalogue you will find our entire product range presented clearly and informatively. A short overview provides you with an informative summary of our product range and helps you to become familiar with the product series. So that readers not familiar with our products can rapidly find their way around our catalogue, we have prepared special aids to get you started. In addition, the detailed technical data, drawings, tables of dimensions and assembly instructions make the catalogue an indispensable reference work. If you do not find what you are looking for, or need advice, simply give us a call on our service number +49 (0)6237/407-0.
